It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers give in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr., TREMBL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1 constructed by the Sanger Centre Chromosome 1 Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            requests: clonerequest@sanger.ac.uk
On Sep 7, 2001 this sequence version replaced gi:14456226.
During sequence assembly data is compared from overlapping clones
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RP11-356N1 is from the library RPCI-11.2 constructed of Pieter de Jong. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity. Insurance activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and information.

C. AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB4239. The proteins can have activities based on the Ct issues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; contides cytostatic; proliferative; vulnerary; immunomodulator; cantidiabetic; antiasthmatic; antirheumatic; antiarthritic; antivinfal; antivinfal; antivinfal; antivinfal; antivinfal; antivinfal; antivinfal; coagulant; concurrence cytostopic; vasotropic; antipsoriatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or coameliorating medical conditions and diagnosing pathological conditions. Cytoplynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating complications. The present invention of the present inventions, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune completed in the proliferation of the present inventions. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to the present invention.

Sequence 1090 B₽; 328 Α; 175 ç; 174 G; 411 Τ, N other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human polynucleotides (AAI63803-AAI64012) and the encoded proteins (AAM434497-AAM43660) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland,

                                                                                                                                                         The present invention relates to the isolation of novel human CC calcium-binding proteins (AAU19892-AAU19969), and cDNA and genomic CC sequences encoding for these proteins. The sequences of the invention CC are useful in the diagnosis, prevention and/or prognosis of diseases (consociated with aberrant calcium flux. Such disorders include CC neurological diseases (e.g. amylotrophic lateral sclerosis, ALS), CC immune dysfunction (e.g. severe combined immunodeficiency, SCID), CC disease (e.g. cancer), blood disorders (e.g. haemophilia), and/or CC disease (e.g. cancer), blood disorders (e.g. haemophilia), and/or CC infectious disease (e.g. acquired immunodeficiency syndrome, AIDS). The CC calcium-binding proteins are also useful as screening tools to CC identify antagonists and/or agonists that may enhance or inhibit CC activities mediated by calcium-binding proteins. The polynucleotides of the invention are also useful in gene therapy. AAS31577-AAS31654 CC represent cDNA sequences encoding for the novel human calcium-binding

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, activity and shrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
